

Agile Product Development

Scrum Simulation

Scrum-Agile Team Roles

A large orange rounded rectangle on the left side of the slide.

Product Owner

- Define and prioritize backlog
 - Create user stories
 - Represent customer and end users
 - Set overall product vision and goals
 - Work closely with team to provide clarification
- 
- A yellow dashed line in the bottom right corner, consisting of several short segments.

A large orange shape on the left side of the slide, consisting of a rectangle with a quarter-circle cutout on its right side.

Scrum Master

- Facilitate Scrum and ensure Agile practices followed
- Guide a self organizing team
- Remove hinderances and distractions
- Lead Scrum events

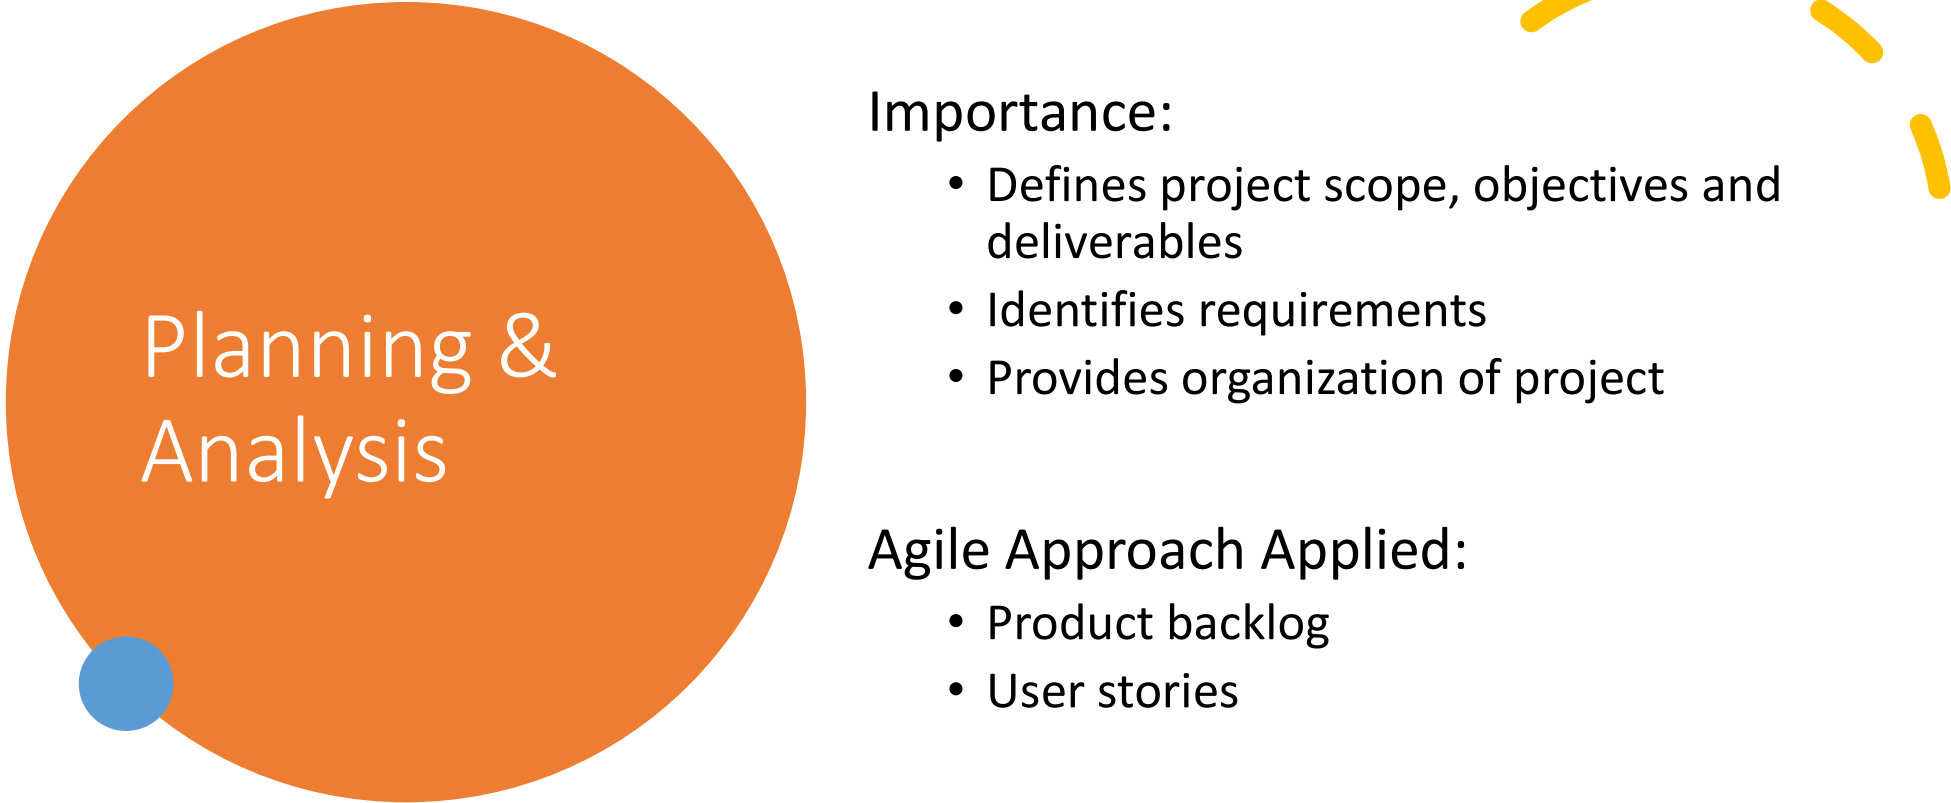

A large orange circle on the left side of the slide, partially cut off by the edge. The word "Developer" is written in white text inside the circle.

Developer

- Collaborate development
 - analysis
 - Coding
 - testing
 - Self-organizes to achieve goals
 - Strives for high quality deliverables
- 
- A yellow dashed line in the bottom right corner, consisting of four curved segments that curve upwards and to the right.

SDLC Phases & Agile Approach

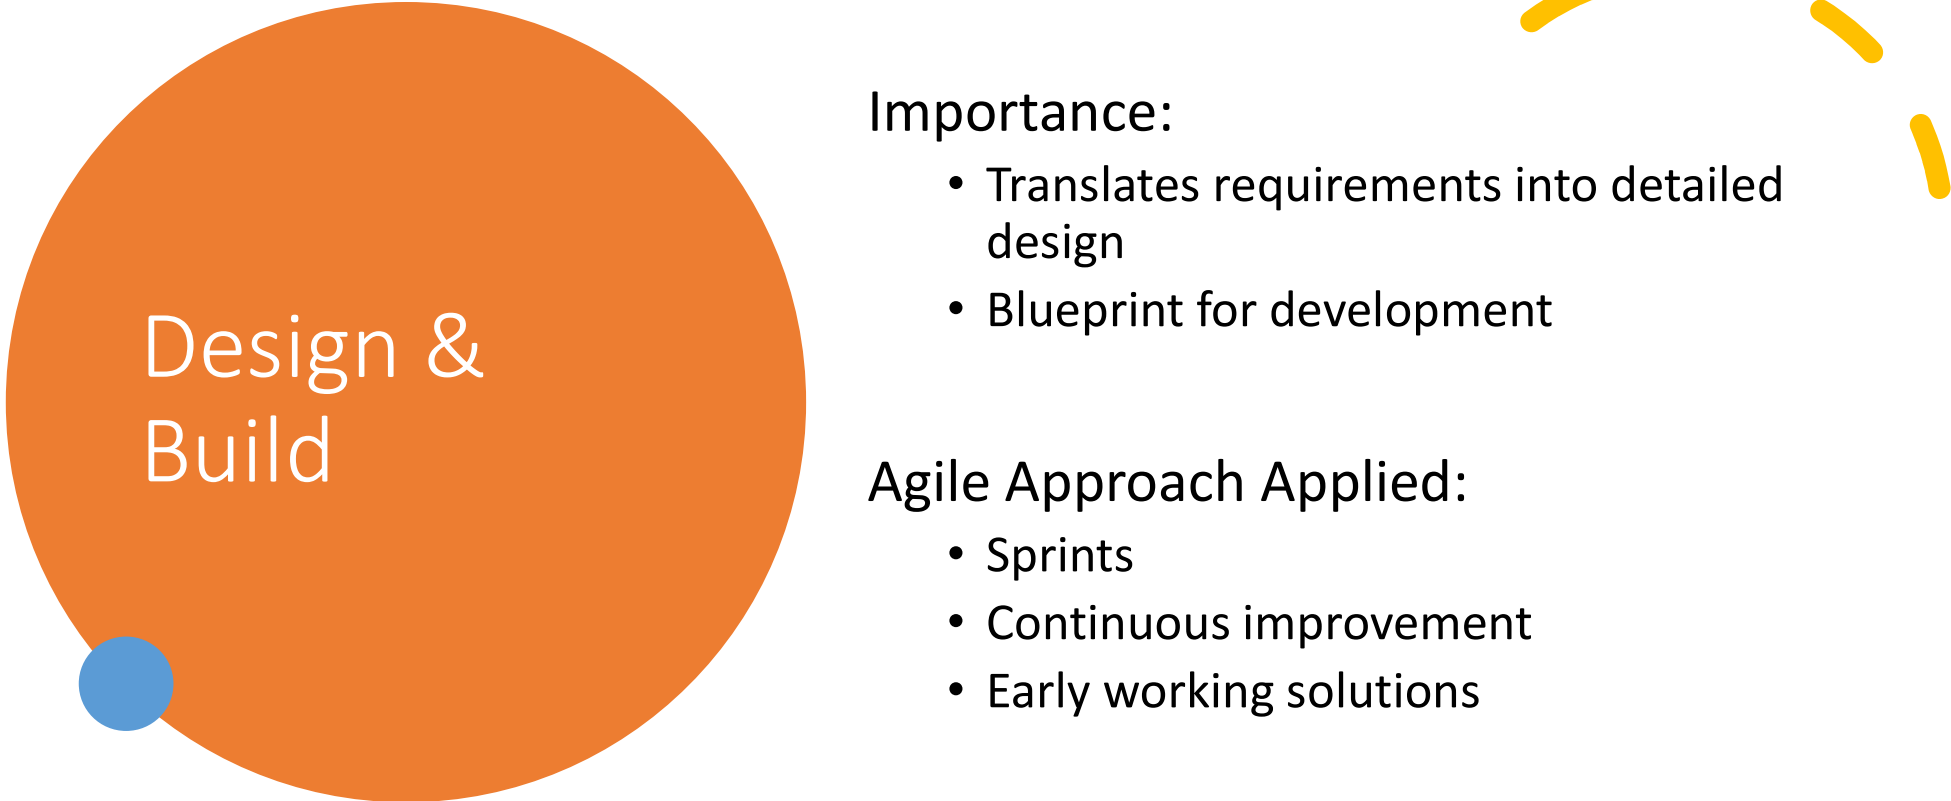

Planning & Analysis

Importance:

- Defines project scope, objectives and deliverables
- Identifies requirements
- Provides organization of project

Agile Approach Applied:

- Product backlog
- User stories

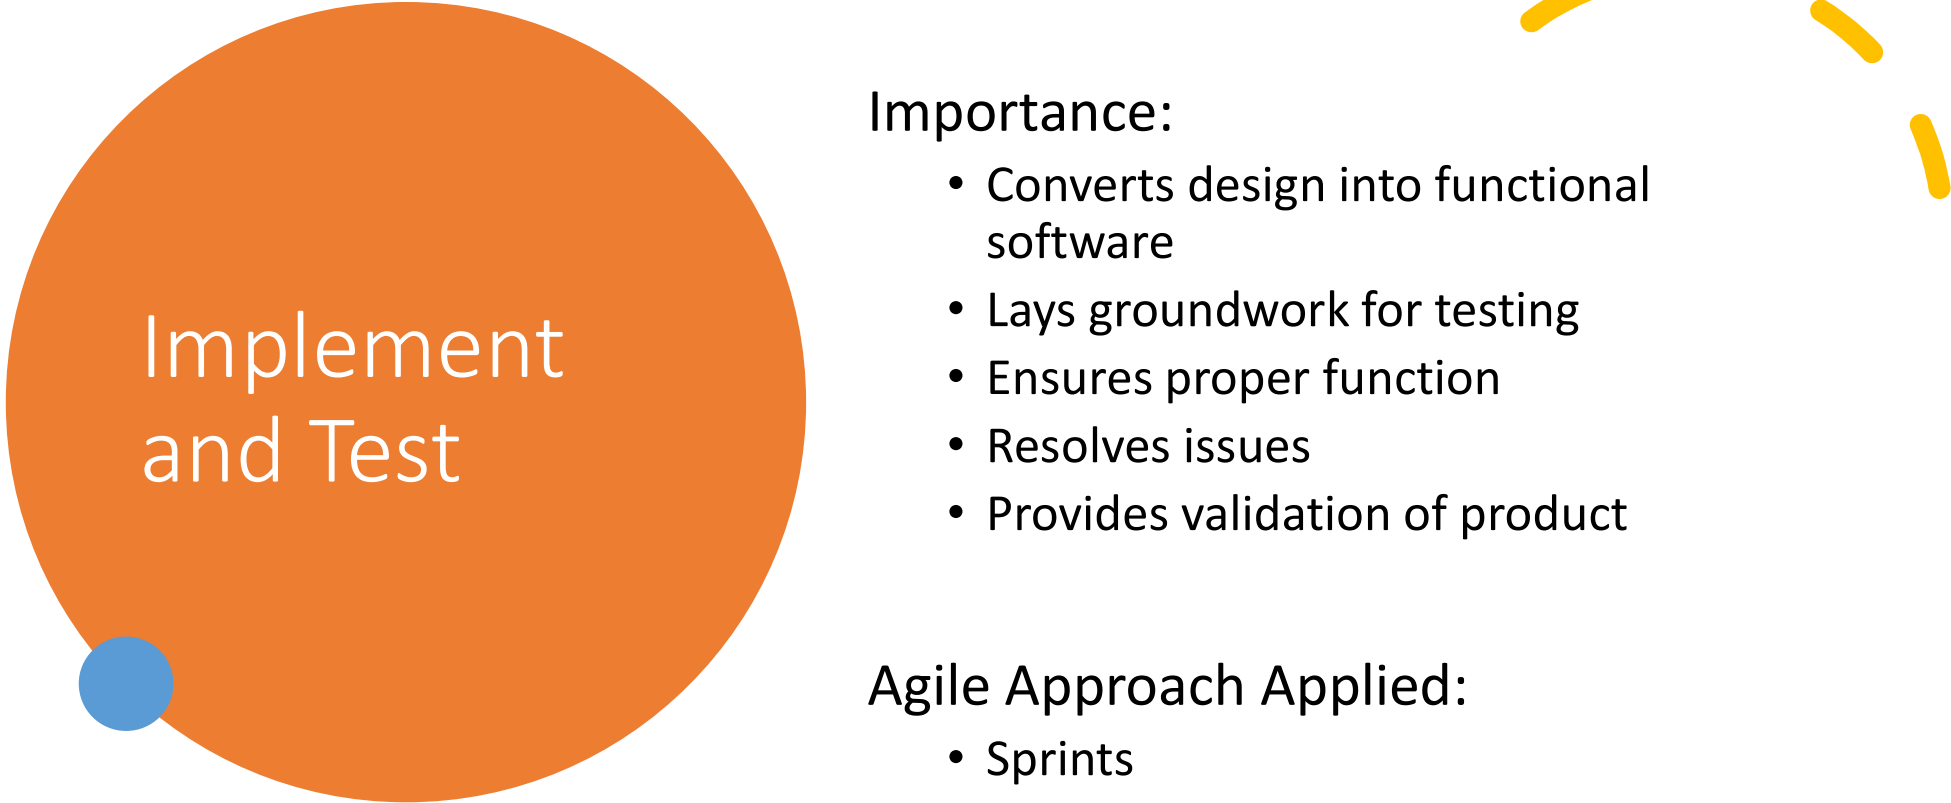

Design & Build

Importance:

- Translates requirements into detailed design
- Blueprint for development

Agile Approach Applied:

- Sprints
- Continuous improvement
- Early working solutions

Implement and Test

Importance:

- Converts design into functional software
- Lays groundwork for testing
- Ensures proper function
- Resolves issues
- Provides validation of product

Agile Approach Applied:

- Sprints
- Test cases
- Continuous improvement

Maintenance & Support

Importance:

- Addresses bugs and updates
- Sustains software

Agile Approach Applied:

- Incremental support

Waterfall vs. Agile: What to Consider When Choosing

Waterfall

- Sequential Process
- Minimal Customer Involvement
- Rigid Process
- Predictable
- Emphasis on Documentation

Agile

- Iterative Process
- High Customer Collaboration
- Adaptable and Flexible Process
- Not Predictable
- Emphasis on Deliverable

Why the Agile Approach For this Project?

For the SNHU travel project, customer collaboration was important because of the type of product. This project was less predictable and needed to be adaptable when changes, such as vacation packages being redirected to wellness, needed to be implemented.

Key Takeaways

Applied Scrum principles throughout the SDLC.

Managed changing requirements through backlog refinement.

Used user stories to align development with customer needs.

Reinforced iterative development and continuous feedback.
